Digital Printing on Vinyl (decals)

The Problem: Create high quality, small quantity pressure sensitive labels (decals) at a reasonable price.

The Solution: By combining the processing power of the computer using digital images and digital resin ribbon printing system, we can now produce 4 color process printing considerably cheaper than the old ways.

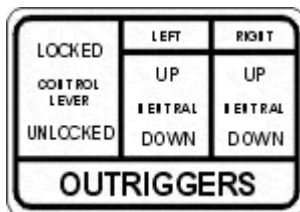

Small Quantity
Low Price
Is it Possible?

Get quality prints on vinyl:

- Without doing color separations
- Without film (Positives or Negatives)
- Without burning screens or making plates
- Without press set up time
- Without die cost when contour cutting is required

Take these things out and what do you get?

- Short turn times (quick delivery)
- Excellent printing registration
- Durable, long lasting prints
- Easy art preparation
- Professional Quality
- Four color process printing
- Great Pricing!

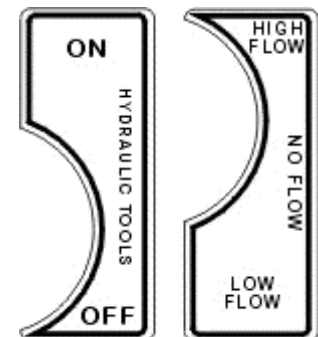

OEM:

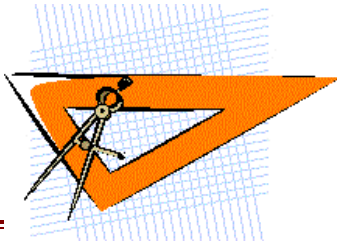

Just think what that means to an Original Equipment Manufacturer that needs 10 decals to mark a control panel, or a safety director that wants to give custom safety award decals to put on the hats of 25 people.

Your Layout or Ours:

Evermac Solutions has several graphic packages to use when creating a new design or layout for you, or send us yours. We work with most of the common file formats to quickly produce that custom decal that you need. Send us your layout and get a quote.

Contour Cut to Fit Panel

Approve the layout on your own web page:
Evermac will maintain a web page just for your company to review your jobs. You can see what the finished part will look like, for approval, before it is released to production.

See your labels
on the internet
before they
are printed.

Color Photos Too

Color Photographs:

Pictures taken with a digital camera and stored as a JPG or a Gif type file can be used with text or other digital images to create that special look. Our 4 color process printing handles this type of print with ease.

Make your prototypes come to life:

When developing a new design or product, samples or prototypes are needed to get the finished look. Make your prototypes come to life with professional graphics and text. If you want your prototype to be well received, make it look like a production unit. The graphics on these one of a kind projects don't require a lot of money if you know how to source it. If you can create the image you need in Corel Draw or your CAD system, we can take your files and produce permanent, quality, decals digitally. With a clear over-laminate you will have an abrasion resistant, production quality prototype.

OK Pay attention:

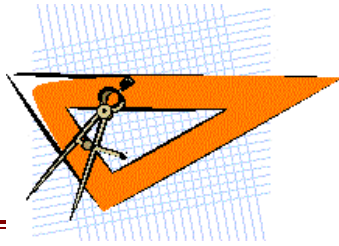

We have a very expensive printer that needs something to do, so send me your special labeling needs for price and delivery!
Send them to:

Photos of installations:

These are shots of custom truck applications.

Here you see a contour cut around switches. This is the same layout shown on page one above.

Decals are sub-surface printed for weather and abrasion resistance.

Anytime you have multiple choice, you can pick the wrong control handle. However, if they are well marked your job gets easier.
